

Your way to us:

Address

University Medical Center Göttingen
Elevator A1, floor 2, room 112
Georg-August-Universität
Robert-Koch-Straße 40
37075 Göttingen

You can reach the University Medical Center Göttingen via the highway exit "Göttingen-Nord". Follow the signs "Kliniken". Parking is available at both the main and east entrances.

To reach the UMG by bus, take the bus lines 21/22, 23, 33 and 41/42 to the "Klinikum" stop.

Clinical Phase I Trials

Early Clinical Trial Unit (ECTU)

Our Early Clinical Trial Unit (ECTU)

Platform for early phase clinical trials

The ECTU of the Fraunhofer Institute for Translational Medicine and Pharmacology ITMP was established in cooperation with the University Medical Center Göttingen (UMG) to create a platform for conducting early clinical phase I/II studies. The focus of the ECTU is on the initial clinical testing of active substances for the treatment of complex central nervous system (CNS) diseases, such as multiple sclerosis or Parkinson's disease.

Cooperation with the University Medical Center Göttingen (UMG)

Translational cooperation through spatial proximity

The ECTU is located within the UMG and provides all the necessary personnel and structural resources required for conducting early clinical trials. The unit is also available for indications beyond neurological diseases.

Innovative Drug Development

Effective transfer of scientific findings into patient care

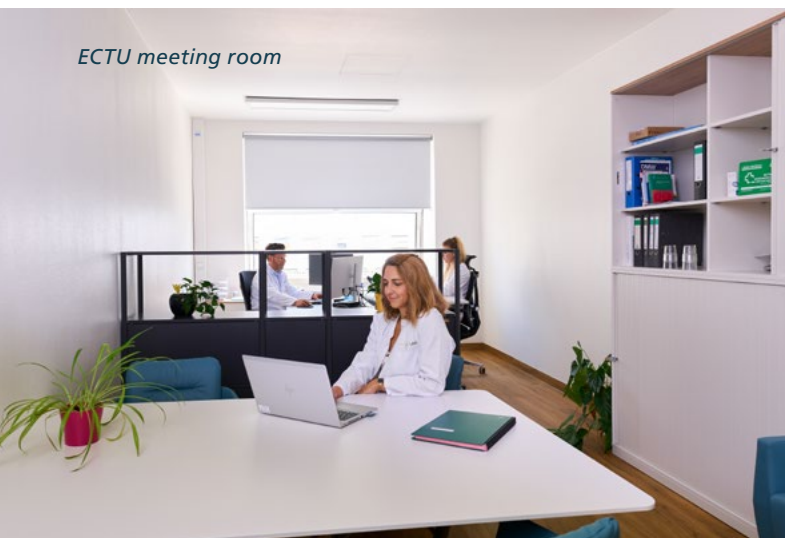

In the field of clinical research, our core expertise lies in the planning and quality-assured implementation of early phase I/II clinical trials. The aim is to transfer scientific findings effectively and specifically into diagnostics, therapy, and prevention. The ECTU, as a link between Fraunhofer ITMP and UMG, serves as an innovative platform for developing novel therapeutic approaches in Göttingen.

The proximity to the intensive care unit, day clinic, and the rooms of the outpatient clinic of the Department of Neurology at the UMG enhances translational cooperation. The unit includes four modern treatment beds, a monitoring room, a doctor's room, a laboratory, and space for documentation and archiving.
